## Experience

Jan 2022 - Present

### Front-end Engineer

Signal Alliance Technology Holding

- Responsible for building the user interface and develop front-end architecture on various client projects using several technologies (mainly React.js).
- Worked with a Team of Developers to build the company's self service portal, which help increased customer service delivery.
- key member of the team that Built an E-Commerce web Application (with major focus on the front-end) for a client in the banking sector which led to revenue increase for the company.
- Managed all the activities on the company's website including bug fixing and feature updates.

May 2021 - December 2021

### Front-End Engineer (Volunteer)

United states of Africa.

- Collaborated with a group of web designers, back end developers and UX designers from other African countries to design and build the official website of United states of Africa (an NGO), where i focused on building the front-end UI and integrate it's contents with data from the back-end.
- Added to the company code base by writing reusable blocks of code that minimizes the time needed for new developers to get accustomed to the code base and add new features in the future.
- I Implemented a custom select option that shows the list of countries all over the world with their custom flags and a search functionality. which helped increase the User experience of the website.
- Attended sprint and retrospective sessions with fellow developers to brainstorm and come up with ideas for new features and updates.

Sep 2020 - April 2021

### Front-End Developer intern

Codeware Nigeria

- Testing and Debugging: Learnt the entire process of software development Lifecycle(SDLC).
- Helped in converting wire-frames, mock-ups and prototypes for products into functional and scale-able web Applications and seeing them to deployment.
- Developed web pages for PERXELS DESIGN SCHOOL using an internal content management system.
